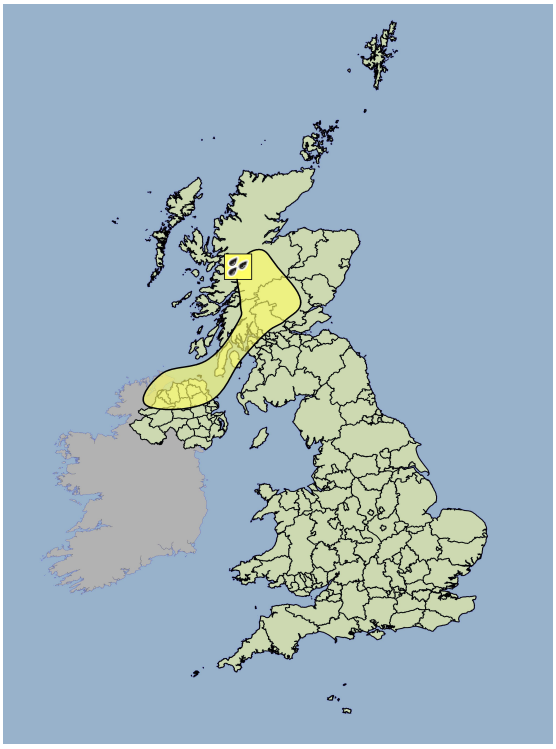
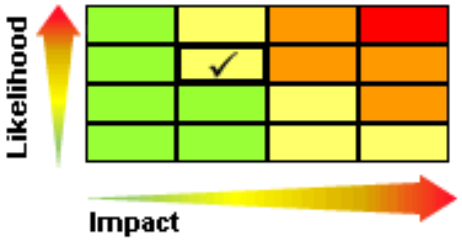
National Severe Weather Warning Service





Chief Forecasters Assessment
A deep depression is now moving east past northern Scotland, with an active occluded frontal system bringing further heavy rain across parts of northern Britain for a time today. The risk of localised flooding appears to be highest where this rain coincides with melting of the snow that fell a day or so ago. Also of note, snow will persist on the highest roads across Scotland today, and then snow levels will fall again overnight, for which a separate warning has been issued.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **10:25 on Thu, 15th Jan 2015** until **18:00 on Thu, 15th Jan 2015**

A band of sometimes heavy rain will continue to affect parts of Northern Ireland, western and central Scotland today. With falling snow confined to hills for a time, a thaw of lying snow at lower levels will continue. The public should be aware of the risk of some minor flooding and disruption to travel.

This is an update to extend the area of the warning further north towards the Great Glen.
